

Number of children

Number of families

[illegible]

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. Error bars represent the standard error of the mean.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

THE UNIVERSITY OF CHICAGO LIBRARY

Abstract The purpose of this study was to determine whether there were differences in the prevalence of self-reported depression between men and women who had been exposed to violence during childhood and adulthood. Data from the National Longitudinal Study of Adolescent Health (*N = 9,800*) were used to examine the association between exposure to violence and self-reported depression among adolescents. Results showed that exposure to violence during childhood and adulthood was associated with higher rates of self-reported depression. Furthermore, the association between exposure to violence and self-reported depression was stronger for women than for men.

Figure 1: Schematic representation of the experimental design. The figure shows two rows of stimuli. The top row is labeled 'Stimulus 1' and contains three items: a 3x3 grid of numbers, a 3x3 grid of letters, and a 3x3 grid of symbols. The bottom row is labeled 'Stimulus 2' and contains three items: a 3x3 grid of numbers, a 3x3 grid of letters, and a 3x3 grid of symbols. Arrows indicate the sequence of stimuli and the response.
